Plots and Interactives using GeoGebra

TABLE OF CONTENTS

MODULE 1: What are the limits of functions? How is the continuity of functions described? 1

LESSON 1: What is a limit? 5

Estimating the circumference of a circle and the value of π 7
Areas of various and irregular shapes 8
Limit of a sequence 9
Intuitive notion of limits 10

LESSON 2: What are one-sided limits? 17

One-sided Limits 17
Formal definition for one-sided limits 19

LESSON 3: What is the easiest way to evaluate a limit? 27

Rules in evaluating limits 27
Resolving indetermine forms of type $\frac{0}{0}$ 35

LESSON 4: How to evaluate limits involving infinity? 41

Infinity and Infinite Arithmetic 42
Limits at Infinity 47

LESSON 5: When is the function value equal to the limit at the point? 59

Continuity at a Point 60
Other ways to check for Continuity at a Point 63
Continuity on Intervals 66
Types of Discontinuities 68

Philippine Copyright 2021

LESSON 6: How can you tell if a function is continuous? 77

Properties of Continuity 77
Continuity of Polynomial Functions and Rational Functions 78
Continuity of Trigonometric Functions 78
Continuity of Exponential Functions and Logarithmic Functions 79
Continuity of the Composition of Functions 81
Intermediate Value Theorem and the Intermediate Zero Theorem 82

MODULE 2: How does differentiation work? 91

LESSON 7: What is a derivative? 95

Derivatives as slopes of tangent lines 96

LESSON 8: When is a function differentiable? 107

Differentiability and Continuity 107

LESSON 9: Can you differentiate without evaluating the limit? 115

Basic differentiation rules 115
Derivatives of Trigonometric Functions 117
Higher-order derivatives 118

LESSON 10: What is the Chain Rule? 123

The Chain Rule 123

LESSON 11: How can you differentiate implicit equations? 131

Implicit differentiation 131

Philippine Copyright 2021

MODULE 3: How does antidifferentiation work? 143

LESSON 12: What is an antiderivative? 147

Basic Antidifferentiation Rules 148
Antiderivatives of Exponential, Logarithmic, and Trigonometric Functions 152
Differential Equations 156

LESSON 13: What are the other rules used in antidifferentiation? 165

Substitution Rule 166
Antiderivatives Involving Trigonometric Functions 170
Indefinite integrals 173
The Table of Integrals 173

LESSON 14: How to compute the approximate area of a region under a curve? 179

Approximating the Area of a Region under a Curve using the Riemann Sum 181

LESSON 15: What are the Fundamental Theorems of Calculus? 195

The Fundamental Theorems of Calculus 196
Rules for Evaluating Definite Integrals 204

LESSON 16: How do you find the exact area of a plane region between curves? 211

Area of the Plane Region Between Two Curves using Horizontal Strips 218

Philippine Copyright 2021

MODULE 4: How do you apply the concepts of Calculus in real-life situations? 22

LESSON 17: How can you evaluate limits with indeterminate forms? 231

Indeterminate Forms of $\frac{0}{0}$ and $\frac{\infty}{\infty}$ 232
The L'Hôpital's Rule 233

LESSON 18: How can you use derivatives for optimization? 247

Relative and Absolute Extrema 248
Extreme Value Theorem (EVT) 251

LESSON 19: How can you use derivatives for optimization? 257

LESSON 20: What is Exponential Growth and Decay? 267

Order of a Differential Equation 268
Separable Differential Equations 268
Exponential Growth and Decay 270

KEY WORDS 281
REFERENCE 283
