GENERAL BIOLOGY 2

SERIES EDITOR
JAIME D.L. CARO, PH.D.

TABLE OF CONTENTS

MODULE 1: What are the homeostatic mechanisms in plants and animals? **1**

LESSON 1: What are plant and animal organ systems? **5**

Describing the structure and function of organs in animals	6
Digestive System: Why You Should Chew Your Food Properly	8
Circulatory System: What Goes Around, Comes Around	9
Respiratory System: Breathing Is Second Nature	9
Excretory System: The Body's Waste Removal Facility	10
Endocrine System: Cell Signaling	11
Nervous System: Communication Is Key	12
Muscular System: Move It And Groove It	13
Skeletal System : Flexible Yet Durable	14
Integumentary System: Skin-Deep	14
Immune System: Defense Is The Best Offense	15
Reproductive System: Self-Perpetuation	16
Describing the structure and function of tissues and organ systems in plants	16
Describing how organs develop in plants and animals	19

LESSON 2: How do organ systems react to environmental stimuli? **27**

Differentiating organ systems of plants and animals in performing biological processes	27
Chemical and Nervous Control	28
Sensory and motor mechanisms	29
Reproduction	31
Nutrition	33
Gas Exchange	34
Transport and circulation	35
Regulation of Body Fluids	36
Immune Systems	37
Explaining how animals respond to environmental stimuli	38
Explaining how plants respond to environmental stimuli	40

LESSON 3: How do organisms maintain steady state internal conditions?	47
Defining homeostasis	47
Explaining why organisms need to respond to environmental stimuli and maintain steady state internal conditions	48
Describing how various organ systems enable homeostasis	49
LESSON 4: How do feedback loops maintain homeostasis?	59
Explaining how feedback mechanisms maintain homeostasis	59
Illustrating the major features of feedback loops that produce homeostasis	61
MODULE 2: How are genetic traits inherited?	69
LESSON 5: What are some of Mendel's Laws of Inheritance?	73
Law of Dominance and Law of Segregation	75
Law of Independent Assortment	77
Probability and Chi-square Analysis	78
LESSON 6: Why are some inherited traits related to a parent's sex?	85
Sex Determination in Humans	86
Sex Determination in Other Organisms	87
Sex-Related Inheritance	90
LESSON 7: What are the modifications to Mendel's classic ratios?	97
Allelic Interaction	98
Lethal Alleles	101
Epistatic Interaction	102
Environmental Interaction	103

LESSON 8: How are DNA and protein structures related to the expression of particular characteristics in individuals? 109

DNA: Mechanism for Heredity	110
DNA Packaging and Chromosome Structure	112
Genetic Mutations	113
Large Scale Mutations	115

LESSON 9: What are the steps in DNA replication and protein synthesis? 119

DNA Replication	120
Translation: From RNA to Proteins	123

LESSON 10: What processes are involved in genetic engineering? 129

Define genetic engineering	129
Describe the processes involved in genetic engineering	130
Provide examples of products of genetic engineering	131

LESSON 11: What are the applications of recombinant DNA technology? 137

Define recombinant DNA technology	137
Describe the techniques used in recombinant DNA technology	138
Provide examples of products of recombinant DNA technology	150

MODULE 3: How are genetic traits inherited? **159**

LESSON 12: What are the general features of the history of life on earth? **163**

Subdivisions of the Precambrian and the early signs of life	163
Subdivisions of the Phanerozoic Eon and the further diversification of life	168
The Age of Reptiles	170
The “Big Five” Mass Extinction Events	172

LESSON 13: How did evolutionary thought develop? **177**

The early scientists who contributed to shaping and developing evolutionary thought	177
The beginning of modern evolutionary thought: Jean-Baptiste de Lamarck	181
Charles Darwin: The Father of Evolution and his work ‘The Origin of Species’	182

LESSON 14: What are some pieces of evidence of evolution? **189**

Evidence of Evolution	190
Genetic Sequence	191
Biogeographic Evidence	192
Present-day pieces of evidence that support Evolution	192

LESSON 15: What are the mechanisms in evolution as inferred by Charles Darwin? **197**

Descent with Modification and Natural Selection	197
Darwin’s Observations and Inferences	198
Natural Selection: Fitness and Reproductive Success	198
Modes of natural selection	200
Balancing Selection	201
Levels of Selection and Other Types of Natural Selection	202
Agents of Selection	204
Limitations of Natural Selection	204

LESSON 16: What drives evolution among populations?	209
Sources of genetic variation	209
Types of Mutations	210
Hardy-Weinberg Principle	214
Other Mechanisms of Evolution	216
Interactions between mechanisms of Evolution	217
LESSON 17: How are new species formed? How can evolutionary relationships among organisms be deduced?	223
What is a species?	224
Reproductive Isolating Mechanisms	226
Inferring Relationships Between Organisms	229
MODULE 4: What are some of the methods of classifying organisms?	235
LESSON 18: How do we classify organisms into different taxa?	239
Define taxonomy and the hierarchical classifications of organisms	240
Define systematics and phylogenetic trees	242
LESSON 19: What are the shared and unique characteristics of a specific taxon relative to a taxa?	249
Differentiate homologous, orthologous, and paralogous genes	250
LESSON 20: What procedures can be used to establish evolutionary relationships among organisms?	257
Demonstrate the methods used to construct phylogenetic trees	257
Explain how to interpret the results of phylogenetic trees	258
