

GENERAL PHYSICS 2

Authors

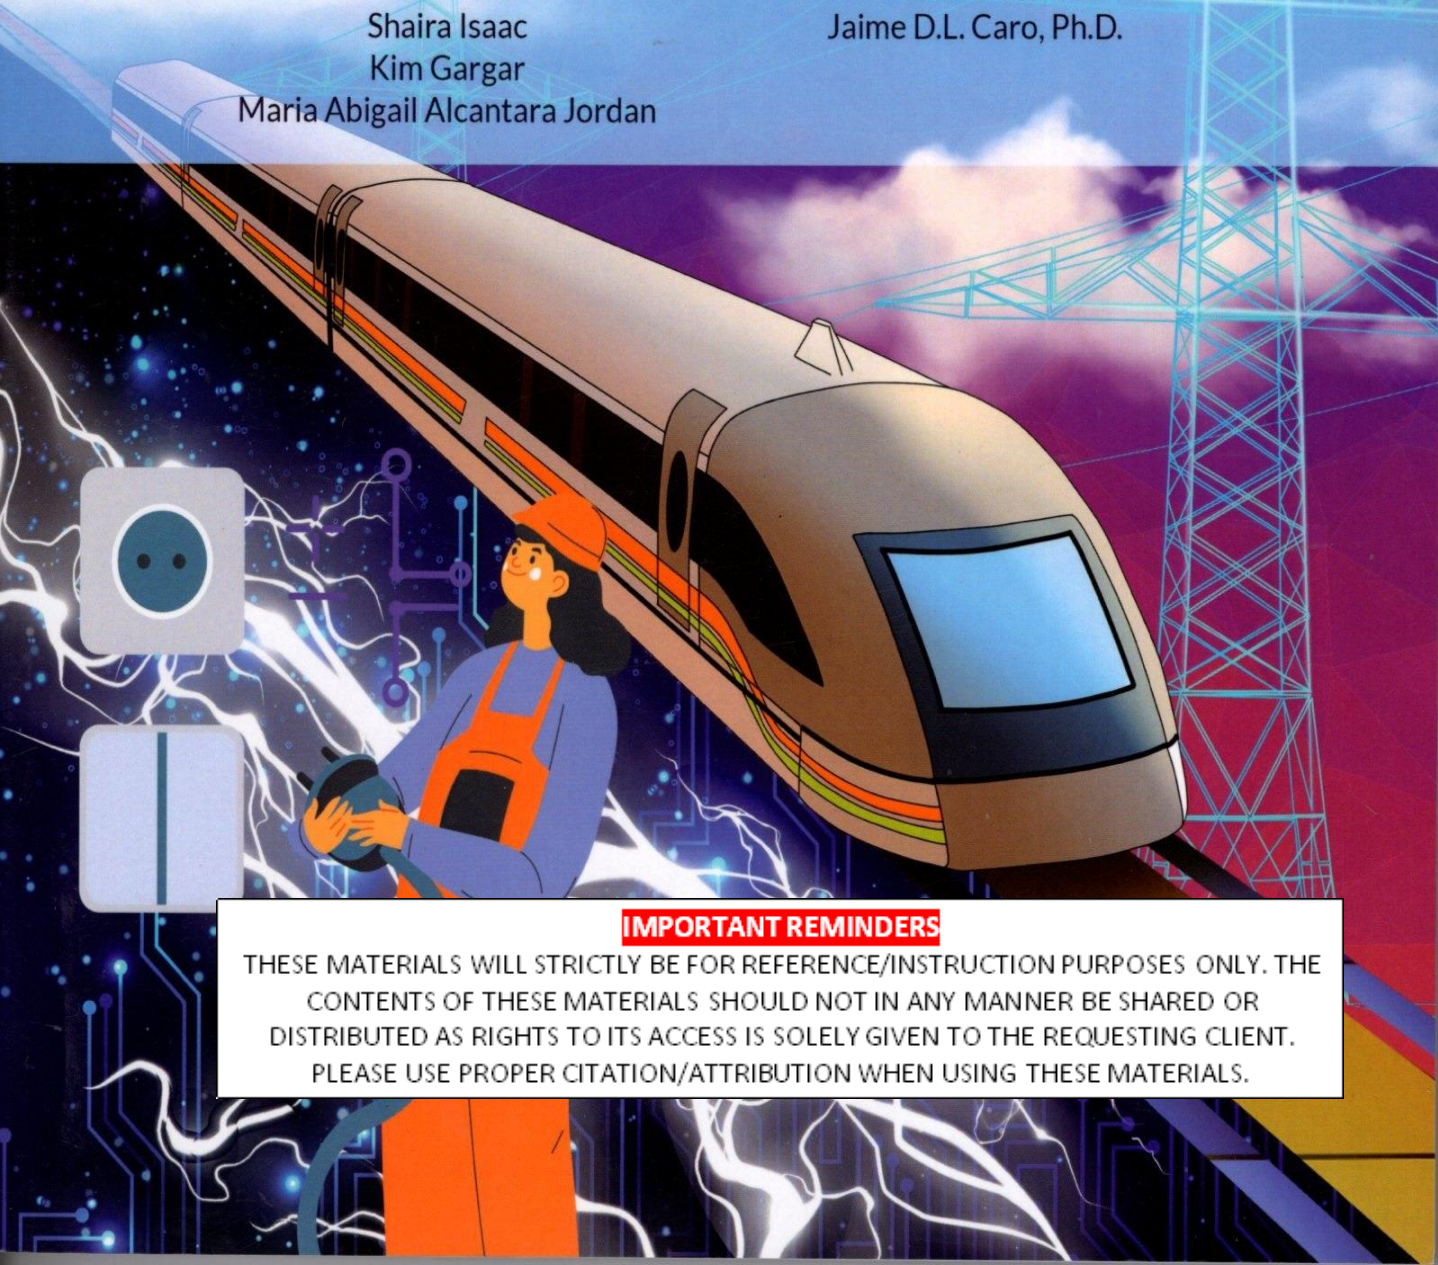

Shaira Isaac

Kim Gargar

Maria Abigail Alcantara Jordan

Series Editor

Jaime D.L. Caro, Ph.D.

IMPORTANT REMINDERS

THESE MATERIALS WILL STRICTLY BE FOR REFERENCE/INSTRUCTION PURPOSES ONLY. THE CONTENTS OF THESE MATERIALS SHOULD NOT IN ANY MANNER BE SHARED OR DISTRIBUTED AS RIGHTS TO ITS ACCESS IS SOLELY GIVEN TO THE REQUESTING CLIENT. PLEASE USE PROPER CITATION/ATTRIBUTION WHEN USING THESE MATERIALS.

TABLE OF CONTENTS

MODULE 1: What is electricity

LESSON 1: What is Electric Charge? What is Coulomb's Law?

Electric Charge	5
Law of Electrostatics	7
Conservation of Electric Charge	8
Insulators, Conductors, and Induced Charges	8
Ways of Charging Up an Object	9
Coulomb's Law	10

LESSON 2: What is an Electric Field? What is Gauss's Law?

Electric Field	17
Electric Field Calculations	18
Electric Field Lines	22
Electric Flux	24
Gauss's Law	26

LESSON 3: What is Electric Potential?

Equipotential Lines	40
---------------------	----

LESSON 4: How do capacitors work?

Capacitors and Capacitance	54
Capacitors in Series and Parallel Connection	57
Energy Stored in a Charged Capacitor	59
Dielectrics	61

LESSON 5: What is an electric circuit? How does electricity work?

Current	72
Conductivity and resistivity	74
Resistance	77
Resistors	78
Electromotive Force	80
Energy and Power in Electric Circuits	82
Cost of electricity consumption—how is it determined?	83
Electrical Hazards	84

LESSON 6: How do you analyze complex electric circuits?

What are RC circuits?

Resistors in Series Connection	96
Resistors in Parallel Connection	97
Kirchhoff's Laws	99
Kirchhoff's Junction Rule or Current Law	100
Sign Conventions for Kirchhoff's Loop Rule or Voltage Law	101
Resistance-Capacitance (RC) Circuits	101

MODULE 2: What is magnetism?

LESSON 7: How do magnetic fields work?

Magnetic Poles vs. Electric Charge	114
Magnetic force on a moving charge	115
Magnetic flux	117
Lorentz Force	119
Magnetic Force on a Current-Carrying wire	121

LESSON 8: What are the sources of magnetic fields?

Magnetic Field due to a Moving Point Charge	129
Magnetic Field due to a Current-carrying wire segment	130
Ampere's Law	131

LESSON 9: What is magnetic induction?

Lenz's Law	146
Demonstration of Faraday's Law of Induction and Lenz's Law: Magnet falling in a Copper Pipe	147

LESSON 10: What is inductance?

Mutual Induction and Mutual Inductance	153
Self-Induction and Self-Inductance	154
Inductors and Magnetic Field Energy	155
Alternating current vs. Direct Current	156
LC Circuits	158
Spring Mass Systems and LC Circuits	159
Other applications of Magnetic Induction	161

MODULE 3: What are electromagnetic waves?	
How do they behave?	169
LESSON 11: What is light? What makes it an electromagnetic wave?	173
Maxwell's synthesis of electricity, magnetism, and optics	173
EM waves and light	175
Properties of electromagnetic waves	176
LESSON 12: What happens when light undergoes reflection and refraction?	183
Law of Reflection	183
Law of Refraction	184
Total internal reflection	185
Broadband WiFi: an application of reflection and refraction	185
LESSON 13: How does light undergo dispersion and polarization?	191
Dispersion	191
Polarization and Malus' Law	192
Applications of dispersion and polarization and some of their manifestations in everyday life	195
LESSON 14: What is geometric optics? How are its principles used?	201
Plane Mirrors	202
Spherical mirrors	203
Ray tracing	204
Lateral magnification	206
Thin lens	206
Sign conventions	208

LESSON 15: What happens when light undergoes interference and diffraction?	217
Review of Huygens' Principle	218
Assumptions in interference experiments	218
Intensity in interference patterns	220
Interference in thin films	221
Applications of thin film interference	222
MODULE 4: What are the principles of specila relativity, nuclear phenomena, and the dual nature of light and matter?	229
LESSON 16: What happens when objects move near the speed of light?	233
Einstein's Theory of Special Relativity	233
Relativity of Simultaneity	236
Time dilation	237
Length contraction	239
Relativistic velocity addition	239
Relativistic Doppler Effect	240
LESSON 17: What is the energy and momentum of objects moving in relativistic speeds?	245
Relativistic momentum	245
Relativistic generalization of Newton's Second Law	246
Relativistic work and energy	246
LESSON 18: What are photons? How do atomic spectra form?	255
Light: a particle or wave? The longstanding debate	256
Photoelectric effect	256
Photons	257
Atomic Emission and Absorption Spectra	259
Electron energy levels	260

LESSON 19: What are nuclear phenomena?	267
Structure of the Nucleus	267
Radioactive decay	269
Half-life	271
Nuclear fission	272
Nuclear fusion	273
Some applications of nuclear phenomena and related issues	274
LESSON 20: What does it mean when light (and matter)	
is said to be both a particle and a wave?	283
De Broglie's Hypothesis	284
Quantum theory and the Heisenberg Uncertainty Principle	286
Differences between a particle and a wave	287
Wave functions and the Schrodinger's equation	289
KEY TERMS	299
REFERENCES	305
