TABLE OF CONTENTS

MODULE 1: What are the Fundamentals of Physics? 1

LESSON 1: What are the Basic Mathematical Tools Used in Physics? How will You Use Them? 5

Basic Mathematical Tools 6

Calculus 9

Scientific Notation 10

Rules on Exponents 11

LESSON 2: What are Physical Quantities? How do You Measure Them? 17

Physical Quantities and Their Units of Measurement 18

Mass 18

Time 19

Angle 20

Length 22

Area 24

Volume 25

Système International Units 26

Converting From One Unit of Measurement to Another 27

LESSON 3: How do You Know if Your Measurements are True, Precise, or Accurate? How Certain is Your Measurement? 33

Least Count and Accuracy, Trueness, and Precision 34

Determining the Least Count 35

Errors 36

Correcting Random and Systematic Errors 37

Estimating Uncertainty From a Single Measurement 37

Estimating Uncertainty From Multiple Measurements 40

Reporting Measurements and Experimental Results 46

LESSON 4: How do You Graphically Represent Measurements? 53

Linear Regression	55
Error Bars	58

LESSON 5: What are Vectors and Scalars? 65

Scalars and Vectors	65
Graphical Methods in Vector Addition	66
Analytical Method	67
Unit Vectors	69
Scalar (or Dot) Product of Vectors	71
Vector (or Cross) Product	73
Right-hand Rule	75

MODULE 2: How do Objects Move in Space and Time? 81

LESSON 6: How do Objects Move Along a Straight Line? 85

Position in One Dimension	86
Distance and Displacement	87
Speed and Velocity	87
Average and Instantaneous Velocity	89
Relative Motion in One Dimension (1D)	91
Acceleration	91
How can You Derive Acceleration, Speed, and Time from Each Other?	92
Deceleration	93
Free fall	94
Constructing and Interpreting Motion Graphs	95

LESSON 7: How do Objects Move in Various Directions? 103

Position, Velocity, and Acceleration in Two and Three Dimensions	104
Motion Along an Incline	105
Curvilinear Motion	107
Projectile Motion	109
Motion in a Circle	113
Motion of the Simple Pendulum	116
Relative Motion in 2D and 3D and Reference Frames	116

LESSON 8: What are Forces? What are Newton's Laws of Motion? 121

Force	121
Newton's Laws of Force	123
Newton's Laws of Force and Reference Frames	127

LESSON 9: How do You Apply Newton's Laws of Force? 131

Applications of the First Law	132
Applications of the Second Law	133
Applications of the Third Law	137
Forces in Simple Machines	142
Tensile and Compressive Forces	143

MODULE 3: What are Work, Energy, and Gravity? 149

LESSON 10: What is Work? What is Energy? 153

Work Done by a Force	153
Negative Work	155
Work as the Area Beneath the Force vs. Position Curve	155
Kinetic Energy and the Work-Energy Theorem	157
Power	157
The Relationship of Power with Force and Speed	158
Work and Gravitational Potential Energy (GPE)	158
Work Done on a Spring and Elastic Potential Energy	159

LESSON 11: How is Energy Conserved? What are Conservative and Non-conservative Forces? 165

Law of Conservation of Energy	166
Conservative and Non-conservative Forces	170
Stable, Unstable, and Neutral Equilibrium	172

LESSON 12: What Happens when Objects Collide?	179
Center of Mass	180
Locating the Center of Mass	181
Center of Mass of a System of Particles	182
Momentum and Impulse	182
Force and Momentum	184
Conservation of Linear Momentum	184
Elastic and Inelastic Collisions	187
Coefficient of Restitution	189
LESSON 13: How do Rigid Objects Rotate?	193
Quantifying Rotational Motion	194
Angular Acceleration	195
Rotational Vectors and Torque	195
Moment of Inertia	197
Moment of Inertia of Multiple Object Systems	198
Moment of Inertia of Regular Shape	199
Rotational Equilibrium	200
Rotational Kinetic Energy	203
Work Done by a Torque	205
Angular Momentum	205
Torque–Angular Momentum Relation	206
Conservation of Angular Momentum	206
The Gyroscope and the Phenomenon of Precession	207
LESSON 14: What is Newton's Law of Gravity? How does Gravity Affect the Way Planets Move?	213
Gravitational Fields	214
Newton's Law of Universal Gravitation	215
Net Gravitational Force	217
The Universal Gravitational Constant	218
Some Consequences of the Law of Universal Gravitation	218
Planetary Orbits and Kepler's Laws of Planetary Motion	223

MODULE 4: What are the Principles of Periodic Motion, Mechanical Waves, Fluid Mechanics, and Thermodynamics? **233**

LESSON 15: How do Springs and Pendulums Move? **237**

Periodic Motion	238
Simple Harmonic Motion	238
Oscillation	238

LESSON 16: What are Mechanical Waves? How do Sound Waves Behave? **245**

Types of Mechanical Waves	246
Wave Intensity	246
Wave Interference	246
Standing Waves	246
Beats	246
Doppler Effect	246

LESSON 17: How do Fluids Move? **255**

Specific Gravity	256
Pressure	256
Pressure and Depth Relationship	256
Pascal's Principle	256
Buoyancy and Archimedes' Principle	256
Bernoulli's Principle and the Continuity Equation	256

LESSON 18: What are Temperature and Heat? How do You Measure Them? **265**

Temperature Measurement	266
Thermal Expansion	267
Heat and Heat Capacity	267
Calorimetry	267
Mechanics of Heat Transfer	267

LESSON 19: What is the Ideal Gas Law? What is the First Law of Thermodynamics?	277
Ideal Gas Law	278
Internal Energy of an Ideal Gas	278
Heat Capacity of an Ideal Gas	278
First Law of Thermodynamics	278
LESSON 20: How do Heat Engines Work? What is Entropy?	287
Thermodynamic Systems	288
Work Done During Volume Changes	288
Second Law of Thermodynamics	288
Entropy	288
Reversible and Irreversible Processes	288
Carnot Cycle	288
Third Law of Thermodynamics	288
Heat Engines	288
Engine Cycles	288
KEY TERMS	297
REFERENCES	302
