

# EARTH SCIENCE

## **IMPORTANT REMINDERS**

THESE MATERIALS WILL STRICTLY BE FOR REFERENCE/INSTRUCTION PURPOSES ONLY. THE CONTENTS OF THESE MATERIALS SHOULD NOT IN ANY MANNER BE SHARED OR DISTRIBUTED AS RIGHTS TO ITS ACCESS IS SOLELY GIVEN TO THE REQUESTING CLIENT. PLEASE USE PROPER CITATION/ATTRIBUTION WHEN USING THESE MATERIALS.

**Series Editor**

Jaime D.L. Caro, Ph.D.

# TABLE OF CONTENTS

## **MODULE 1: How did the Earth come into being? What makes the Earth your home? 1**

### **LESSON 1: Where did the universe come from? 7**

Big Bang theory	7
Evidence for the Big Bang	10
Alternative theories	15
Common misconceptions about the Big Bang Theory	16
What does the Big Bang theory not answer?	17

### **LESSON 2: How did the Solar System form? 23**

The Solar Nebular Theory	24
Evidence for the Solar Nebular Theory	31
Limitations of the Solar Nebular Theory	32

### **LESSON 3: How did the Earth's interior and atmosphere form? How is the Earth different from and similar to other planets? 37**

Formation of the Earth and Moon system	37
Planetary differentiation in the terrestrial planets compared with the Jovian planets	42

### **LESSON 4: What are the four subsystems that comprise the Earth? How does energy flow into each system? 51**

Laws of Conservation of Matter and Energy: matter and energy are not destroyed nor created	52
The Earth's subsystems and biogeochemical cycles	54
The Anthroposphere	59

## **LESSON 5: What makes the Earth conducive for the existence of life? How can life exist on other planets?** **67**

Defining 'life'	68
Minimum requirements of life	69
Existence of liquid water and other life-friendly characteristics of Earth	72

## **MODULE 2: What is the Earth made of?** **83**

### **LESSON 6: What are minerals? How do they form?** **89**

Minerals defined	90
Physical properties of minerals	93
Overview of common rock-forming mineral groups	101
Identifying the common rock-forming minerals	104

### **LESSON 7: What are igneous rocks? How do igneous rocks form?** **109**

Igneous activity and the rock cycle	109
Bowen's Reaction Series	111
Types of igneous rocks based on chemistry	111
Types of igneous rocks based on texture	112

### **LESSON 8: What are sedimentary rocks? How do sedimentary rocks form?** **121**

Formation of sedimentary rocks and the rock cycle	121
Major groups of sedimentary rocks	124

### **LESSON 9: What are metamorphic rocks? How do metamorphic rocks form?** **135**

Metamorphism and the rock cycle	136
Types of metamorphism according to progression	137
Types of metamorphism according to settings	138
Types of metamorphic rocks based on texture	141
Conditions for metamorphism	144

<b>LESSON 10: What are the Earth's resources?</b>	<b>149</b>
Metallic resources	150
Mining	154
Nonmetallic resources	155
Energy resources	160
Overview of earth resources in the Philippines and Southeast Asia	165
<b>LESSON 11: How does our resource use affect the environment?</b>	<b>175</b>
What does it mean when you say 'environment'?	175
Solid waste pollution	176
Mining-related environmental issues	180
Soil degradation and food security	184
Water-related environmental issues	186
Fossil fuel use, the climate crisis, and ocean acidification	191
Earth systems and the question of 'sustainable development'	199
<b>MODULE 3: How do the Earth's surface and interior operate? What landforms are there?</b>	<b>209</b>
<b>LESSON 12: What is plate tectonics? What does it have to do with Earth's internal structure?</b>	<b>213</b>
The internal structure of the Earth and evidence of its differentiation	214
Plate tectonics	217
Plate tectonics processes and the rock cycle	223
Evidence for plate tectonics	225
The origin of plate tectonics and drivers of plate movement	231
<b>LESSON 13: What are earthquakes? Why do they occur?</b>	<b>237</b>
Stress, strain, and rock deformation	238
Structures associated with brittle deformation: joints and faults	
Earthquakes	239
Plate tectonics and earthquakes	250

<b>LESSON 14: What are volcanoes? Why do they erupt?</b>	<b>255</b>
Sources of heat in the Earth	256
The origins of magma	257
Nature of volcanic eruptions	257
Types of volcanoes	259
Structures and landforms associated with volcanoes	261
Plate tectonics and volcanism	263
<b>LESSON 15: How do mountains and mountain belts form?</b>	<b>265</b>
Structures associated with ductile deformation: folds	270
Plate tectonics and orogeny	272
Theory of Isostasy	275
<b>LESSON 16: What happens when and after rocks experience weathering and erosion?</b>	<b>281</b>
Weathering	281
Erosion	285
Sedimentary environments and some of the landforms associated with them	288
Comparison of surface features and phenomena of select heavenly bodies	297
<b>LESSON 17: What is mass wasting?</b>	<b>303</b>
Factors that determine the vulnerability of Earth materials to mass wasting	305
Types of mass wasting events	306
<b>MODULE 4: What is the history of the Earth? How was it reconstructed?</b>	<b>313</b>
<b>LESSON 18: What are fossils? How do they form?</b>	<b>317</b>
Factors that favor fossilization	319
Mechanisms of fossilization	322
Why study fossils?	324

## **LESSON 19: What is geologic time? How do you date rocks?** **329**

The concept of uniformitarianism	330
Quantifying geologic time	331
Law of fragmented inclusions	338
Principle of faunal succession	338
Index fossils	339
The IUGS-International Commission for Stratigraphy Geologic Time Scale (GTS)	339
Applying relative dating principles and laws: unconformities, folded strata, and intrusive contacts	343
Overview of stratigraphy	346

## **LESSON 20: What happened in the Earth's past?** **351**

Hadean time and Archaean eon (4.6-2.5 billion years ago)	351
Proterozoic eon (2.5 billion-541 million years ago)	354
Phanerozoic eon (541 million years ago-present)	355

## **Key Terms and Definitions** **375**

## **References** **393**
