

# PHYSICAL SCIENCE

Michael Russelle Alvarez • Shaira Isaac  
John Noel Maape • Sheryl Joyce Grijaldo • Ana Rose Ramos

## IMPORTANT REMINDERS

THESE MATERIALS WILL STRICTLY BE FOR REFERENCE/INSTRUCTION PURPOSES ONLY. THE CONTENTS OF THESE MATERIALS SHOULD NOT IN ANY MANNER BE SHARED OR DISTRIBUTED AS RIGHTS TO ITS ACCESS IS SOLELY GIVEN TO THE REQUESTING CLIENT. PLEASE USE PROPER CITATION/ATTRIBUTION WHEN USING THESE MATERIALS.

Jaime D.L. Caro, Ph.D.  
Series Editor

# TABLE OF CONTENTS

## **MODULE 1: What are the building blocks of matter?** **1**

### **LESSON 1: Where did the elements come from?** **5**

Overview of the history of the early universe 5

Stellar evolution and the formation of the heavier elements 7

### **LESSON 2: What are atoms? How was its model developed?** **17**

The atomic theory according to the Ancient Greeks 18

Contributions of alchemy to the development of modern Chemistry 18

The development of John Dalton's model of the atom 21

Models of the atom's structure according to Thomson, Rutherford,

Bohr, and Schrodinger 23

### **LESSON 3: What are chemical reactions?** **29**

How chemical reactions are represented 29

### **LESSON 4: What are nuclear reactions?** **37**

Atomic symbols 38

Elementary particles 39

Types of nuclear reactions 40

Nuclear decay 42

Synthetic elements 43

## **MODULE 2: What are the properties of matter, its behavior, and its uses?** **51**

### **LESSON 5: What is matter? What are its properties?** **57**

Defining matter 57

The different states or phases of matter 58

Classifications of matter 60

The physical and chemical properties of matter 64

## **LESSON 6: Why is molecular structure important to matter's properties?**

**73**

Valence electrons and chemical bonding

74

Molecular geometry and Polarity

76

How Intermolecular Forces of Attraction affects a substance's physical properties

78

## **LESSON 7: What are macromolecules?**

**87**

Biological macromolecules

87

Synthetic macromolecules

93

## **LESSON 8: How do chemicals react?**

**99**

Types of chemical reactions

100

SI units and the concept of the mole

102

Balancing chemical equations

104

The concept of limiting reactant

107

Percent and theoretical yields

109

## **LESSON 9: What factors affect chemical reactions?**

**115**

Collision theory

116

Reaction rate

116

Factors affecting reaction rate

118

Energy changes during chemical reactions

119

Laws of thermodynamics

120

Describing the spontaneity of chemical reactions

121

## **LESSON 10: Why are chemical reactions useful?**

**127**

Chemistry in power generation: batteries

127

Chemistry in medicine

128

Chemistry in cosmetics

130

Chemistry and food security

131

Chemistry and environmental concerns

132

Chemical handling and disposal

134

## **MODULE 3: What is motion?** **143**

### **LESSON 11: How did ancient people analyze the way the Earth and celestial bodies move?** **147**

The cosmos according to Pythagoras	148
The Celestial Sphere	148
Diurnal motion and the sidereal day	151
Annual motion	152
Solstices and equinoxes	153
Parallax	154
How the Ancient Greeks (and other civilizations) observed the universe without the use of telescopes	155
Geocentric models of the universe	158
Early heliocentric models	160

### **LESSON 12: How did Islamic and Renaissance scholars revolutionize our understanding of how celestial objects move?** **167**

Plato's Problem of "Saving the Appearances"	168
Contributions of Medieval Islamic scholars in the study of the motion of the Earth and the planets	169
The Copernican 'revolution' and the fall of the geocentric theory	171
Important discoveries that were made possible by the invention of the telescope	176

### **LESSON 13: What are the Aristotelian and Galilean perspectives on motion?** **183**

Aristotelian motion	183
Galilean motion	186

### **LESSON 14: What are speed, velocity, and acceleration?** **193**

Speed, velocity, and acceleration	193
Interpreting motion graphs	196

<b>LESSON 15: What are Newton's laws of force and gravity?</b>	<b>205</b>
Overview of forces	205
Newton's laws force	206
Concept of inertial reference frames	209
Newton's Law of Universal Gravitation	209
Conservation of momentum, mass, and energy	211
<b>MODULE 4: What is electromagnetism? How do you use it to study the universe?</b>	<b>217</b>
<b>LESSON 16: What is light?</b>	<b>219</b>
Properties of waves	220
Types of waves	221
Wavefronts and Huygens' Principle	223
Wave nature of light	224
The particle nature of light	237
De Broglie's hypothesis: Light has a dual nature	239
<b>LESSON 17: What is electricity?</b>	<b>245</b>
Contribution of Benjamin Franklin to the study of electricity	247
Contribution of Coulomb to the study of electricity	249
Contribution of Oersted	253
Contribution of Ampere	256
<b>LESSON 18: What is magnetism? How do radios work?</b>	<b>256</b>
Contribution of Biot and Savart to the study of electromagnetism	256
Contribution of Faraday	266
Contribution of Maxwell	270
Contribution of Hertz	271
<b>LESSON 19: How do objects behave near the speed of light?</b>	<b>277</b>
Einstein's Theory of Special Relativity	278
Time dilation	281
Length contraction	283
Mass-energy equivalence	285

Einstein's Theory of General Relativity	286
Predictions of General Relativity	289

## **LESSON 20: What are the ways scientists today study the universe and its origins? 299**

Redshift and blueshift	299
Methods used to prove the existence of exoplanets	303
Other tools used by physicists to study the universe	306

Key Terms and Definitions	317
